 **autoChirp** welcomes You

Hi there, I'm autoChirp and I'll assist You scheduling the spread of Your words!

Scheduling, Imports and much more

autoChirp is a small and easy-to-use webapplication to ease the scheduled publication of Your Tweets. You don't have to worry about missing relevant dates as Your stepmothers birthday anymore, just schedule a Happy-Birthday-Tweet within autoChirp and get back to Your daily life.

If You're a power-user, upload a bunch of Tweets from Your desktop or GoogleDrive: Just follow the markup-guidelines describing the creation of a Tweet-table or clone the predefined GoogleDrive Spreadsheet, input Your data and Import the file - et voilà!

Further, autoChirp empowers You to fit more content into Your Tweets by providing the possibility to automagically convert Your longer-than-280-character-Tweets into an image. So whenever You send out an overlength Tweet, remember: You couldn't, without autoChirp.

And of course: Much more!

Group import

Import Your custom **Tsv-file** Tweet groups

Import source

Datei auswählen

Template_Import_Gdrive - Tabellenblatt1.tsv

Encoding

UTF-8

Title

A tsv imported group

Description

A group from tsv

Delay in years

Delay in years, past dates will be ignored. Inputting '0' maps all past dates to their next anniversary.

Actions

 Import group

The delay is used to specify, how many years should be added to the dates, parsed from the tsv-file.

delete selected groups

If You have added tweets to at least one thread, You will be taken to the list view of Your groups after the successful import. There You will find Your created group and additionally for each thread a separate group named according to the pattern: [name of Your group]_Thread_[name of the thread].

Otherwise the TweetGroup-View will open.

That's it! Beware,
that mal-formatted
files will produce
errors! bye :)
