# autoChirp welcomes You

Hi there, I'm autoChirp and I'll assist You scheduling the spread of Your words!

Import from GoogleDrive

Import from Wikipedia

Import from TSV-file

## Scheduling, Imports and much more

autoChirp is a small and easy-to-use webapplication to ease the scheduled publication of Your Tweets. You don't have to worry about missing relevant dates as Your stepmothers birthday anymore, just schedule a Happy-Birthday-Tweet within autoChirp and get back to Your daily life.

If You're a power-user, upload a bunch of Tweets from Your desktop or GoogleDrive: Just follow the markup-guidelines describing the creation of a Tweet-table or clone the predefined GoogleDrive Spreadsheet, input Your data and import the file - et voilà!

Further, autoChirp empowers You to fit more content into Your Tweets by providing the possibility to automagically convert Your longer-than-280-character-Tweets into an image. So whenever You send out an overlength Tweet, remember: You couldn't, without autoChirp.

And of course: Much more!

When importing via Gdrive or a tsv file,  
Connected groups are automatically created  
when You put tweets into threads.  
More about this in the corresponding help  
videos.

**Title****Description****Actions**

So if You want to create your own Connected groups, just set the relevant descriptions the same.

... And that's the  
secret behind  
Connected  
groups. bye :)
